

Help Is Available...

Clean Water Solutions

We are seeking communities who need help!

Dear Homeowner Association,

We are writing because we believe your community can benefit from our work.

Clean Water Solutions Clean Water Solutions (CWS) is Delaware's first non-profit utility capable of owning, operating, and maintaining wastewater and water infrastructure across Delmarva. CWS is a collaboration to support small, rural communities challenged with owning and operating community-owned wastewater and water systems. As a non-profit utility our mission is to leverage federal, state and private funding that are not available to you currently.

We are seeking: Communities who Own their Water and/or Wastewater Systems

WHO?

- We can help any System that is owned and operated by a board of directors, or other similar group
- Your community must be Under-resourced financially, and the system becoming a burden to your community
- Your system may be Under-performing technically

WHERE?

- Delmarva Peninsula
- Your community is in area that is unlikely to be serviced by county or municipal system any time soon

WHY?

Under-functioning, aging wastewater systems pose environmental and public health threats to our communities, and are a logistical & financial burden to Under-resourced communities.

HOW?

Become involved in the Solution! Clean Water Solutions (CWS) is seeking communities who would like to benefit from being relieved of this burden of owning their systems.

We can meet with your community and work to **transfer the burden** of owning and operating your wastewater and/or water system **to the non-profit utility for affordable rates.**
